Abstract. The Entrance Exam of the Universities (EEU) in Iran is a multiple-choice high-stakes test that affects the teachers, students, parents and other stakeholders. The EEU is designed to screen the high school graduates for admission into higher education. This study aimed to explore the impact of this high-stakes test on the Iranian high school English teachers. To achieve the aim of the study, a validated survey questionnaire was administered to stratified random sample of 132 high school English teachers who were teaching in the five main educational districts in the city of Isfahan, Iran. The data analysis revealed that little attention was given to three language skills of speaking, writing, and listening in the classroom as these skills are not tested in the EEU. Moreover, the EEU negatively and implicitly influences English teachers to teach to the test format.

Key words: Entrance Exam of the Universities (EEU), High-stakes test, Stakeholder, English teacher

1. Introduction

The concept of testing can be viewed from two different perspectives: traditional testing and use-oriented testing (Shohamy, 2001). The main focus of traditional testing is on designing and developing quality tests to accurately measure the knowledge of test takers. Traditional view focuses on the objective type of items and ignores the test use. In fact, traditional testing takes tests as isolated events from test takers, educational system, and society. Use-oriented testing, on the other hand, takes testing as an embedded issue in educational, social and political contexts. This view “addresses issues related to the rationale for giving tests and the effects that tests have on test takers, education and society” (Shohamy, 2001, p. 4). A great number of issues such as test takers’ activities for the test, the teachers’ method of teaching, materials designed for the test, and the effects of the test results on the stakeholders are all taken into consideration in use-oriented view of testing. Therefore, from use-oriented view of testing, this study aimed to explore the impact of the EEU on the Iranian high school English teachers.

2. Research background

Although a great number of studies have been conducted on the effect of the tests in different contexts, little attention has been given to the high-stakes university entrance exams. Researchers from China, Hong Kong, Japan, Israel, and Turkey dealt with the English section of the university entrance exams in their own countries. The findings of these studies revealed that high-stakes tests should be examined based upon context in which they are administered (see Qi, 2004; Cheng, 1998; Watanabe, 2004; Ferman, 2004; Yildirm, 2010). Therefore, picking up on the complexity of this phenomenon, this study aimed at exploring the impact of the EEU in Iran on the high school English teachers. Since 1960s, the EEU in Iran has been the sole criterion for the admission into higher education. This national test is a combination of some multiple-choice

items and cloze tests regarding most of the courses that the students have been taught during a period of four years study in high school and pre-university center. It is administered in five main groups of students depending on their fields of study in high school. Some of the topics including English, Persian Literature, Arabic, and Theology are tested for the students in all the majors. The English section of the test includes 25 multiple-choice items and a cloze test. The students are given 20 minutes, as required by this section of the test, to answer the questions. The first six or seven items are regarding grammatical points and the remaining items include vocabulary items, a short cloze passage and two short reading passages followed by some multiple-choice comprehension questions.

3. Method

3.1. Research design

A validated questionnaire was used as the research instrument in this survey study to explore high school English teachers' attitudes towards the impact of the EEU on English teaching in Iranian high schools. The questionnaire consisted of two main parts and was designed and prepared in English. The first part consisted of six categories of teacher personal characteristics related to demographic information and current teaching situations. All the items in this part were designed on a multiple-choice basis. The second part consisted of two categories and 16 items altogether. This part mainly dealt with the teachers' attitudes towards the EEU and all the items were designed on a five-point Likert scale of agreement.

3.2. Sampling for the survey

The estimated number of high school English teachers in the city of Isfahan was 436 and based upon the table for determining random sample size from a given population suggested by Payne and McMorris (1967), 200 English teachers were sampled. Stratified random sampling was used to ensure that adequate numbers of English teachers were represented from all five educational districts. The total return rate was 66 % (132 questionnaires were returned).

4. Results

4.1. Teachers' demographic information

The analysis of the teachers' demographic information revealed that almost half of the teacher respondents were male (50.8 %) and the other half (49.2 %) were female. Almost three fourth of the teachers aged 20 to 40 and the remaining one fourth aged over 40 indicating that the majority of the English teachers were young or middle-aged. About half of the respondents (48.5 %) had BA and more than 40 percent of them had MA. One teacher had also BSc which shows he has not studied English as an academic major. Almost two third (65.1 %) of the sampled teachers were qualified professionally because they held teacher's certificate or advanced diploma in education. More than half of the respondents (53 %) were teaching in pre-university centers as the major grade that they were teaching.

When the high school teachers were asked about the medium of instruction they use when they teach English in the classroom, about one-third of the respondents (31.8 %) stated that they use English supplemented with occasional Persian explanation. Another one-third of the sampled teachers (31.8 %) also reported that they use half English and half Persian when teaching English in the classroom. In fact, there are more teachers who use 'English supplemented with occasional Persian explanation' and 'half English and half Persian' as their medium of instruction compared to those who use 'English only' as the medium of instruction in teaching English in the classroom.

4.2. Teachers' attitudes and perceptions of the EEU

The purpose of the second part of the questionnaire was to explore the teachers' attitudes towards the EEU. The obtained results from two categories of this part are reported according to the following themes:

- Possible pressure under the EEU
- Teaching methods teachers adopt due to the context of the EEU

4.2.1 Possible pressure under the EEU

In this category, the high school English teachers were asked what kind of extra work or pressure the EEU puts on their teaching. As it can be seen in Table 1, five items got the highest ratings. The majority of the respondents believed that the EEU makes them organize more exam practices (mean = 4.07). This belief is a clear indication of the teachers' attention to the EEU. They try to deal with practicing more mock exam papers of the EEU and prepare the students to sit for this exam. This does not necessarily mean that the teachers are affected by this high-stakes exam and it makes them direct their teaching method towards the test. More than two third of the respondents indicated that they have to employ new teaching methods to fulfill the students' expectations. It is obvious that the students' expectations affect teachers to teach in a way to satisfy students' needs for passing this exam. Moreover, about two third of the respondents believed that the EEU forces them to revise some parts of the existing materials, follow the teaching syllabus, and prepare more materials for the students. Such beliefs indicated that the teachers modify the available materials and prepare more materials for the test-takers to meet their needs for passing this exam. On the other hand, more than half of the sampled teachers believed that the EEU does not force them to attend the classes prepared (mean = 2.55). The teachers are not required to prepare different segments for each lesson section. However, this belief does not necessarily mean that the teachers are willing towards the possible changes in the format of the EEU.

Table 1. The teachers' perceptions of extra work and pressure under the EEU according to the mean scores

Statements	Mean
Organizing more exam practices	4.07
Employing new teaching methods	3.59
Revising some of the existing materials	3.58
Following the teaching syllabus	3.56
Preparing more materials for students	3.31
Meeting new challenges in teaching	3.30
Setting up new teaching objectives	3.10
Doing more lesson preparation	2.55

4.2.2 Teaching methods teachers adopt due to the context of the EEU

When the teachers were asked about changes they make in their teaching due to the context of the EEU, the majority of them (89.4 %) indicated that they put more stress on reading comprehension activities (see Table 2). Hence, the teachers may be affected in a way to ignore the productive skills of writing and speaking and the receptive skill of listening. About three fourth of the teachers (74.2 %) also indicated that they teach according to the EEU format due to the pressure from the context of this test. This finding clearly shows that the teachers are negatively influenced by the effect of the EEU. According to the teachers' beliefs, they direct their teaching methods towards the test format and adopt new teaching methods to help their students perform well on the EEU. Even about two third of the teachers (60.6 %) believed that the EEU motivates them to encourage their students to participate in class. However, this does not necessarily mean that the teachers involve their students in all four language skills.

On the other hand, the majority of the surveyed teachers (82 %) believed that they do not employ communicative approach in their teaching due to the context of the EEU indicating how much the EEU has negatively affected the teachers' method of teaching. Although most of the teachers consider the communicative approach and task-based approach as the best methods of teaching, they do not employ these methods when they are teaching in high school classes. Moreover, more than three fourth of the respondents

(78 %) confirmed that they do not employ real life language tasks, and more than two third of the sampled teachers indicated that they even ignore communicative skills and integration of skills.

Table 2. The teachers' attitudes towards teaching methods due to the context of EEU

Statements	Strongly disagree and disagree		Undecided		Agree and strongly agree	
	Frequency	Percent	Frequency	Percent	Frequency	Percent
To teach according to the test format	30	22.7	4	3.0	98	74.2
To adopt new teaching methods	36	27.3	7	5.3	89	67.5
To use a more communicative approach in teaching	82	62.1	4	3.0	46	34.8
To put more stress on reading comprehension activities	9	6.8	5	3.8	118	89.4
To put more emphasis on communicative skills	73	55.3	11	8.3	48	36.3
To put more emphasis on the integration of skills	70	53.0	12	9.1	50	37.9
To employ more real life language tasks	78	59.1	15	11.4	39	29.5
To encourage more students' participation in class	38	28.8	14	10.6	80	60.6

5 Discussion and conclusion

The negative impact of the EEU can be seen in the teachers' tendency towards using Persian as the medium of instruction in English classes. The teachers try to get the meaning of the language across to students so the students can better perform on the EEU. The findings of the study clearly indicated that the majority of the surveyed teachers believed that the EEU makes them organize and practice more mock exam papers of the EEU and prepare their students to sit for this exam. This does not necessarily mean that the teachers are affected by this high-stakes exam and it makes them direct their teaching method towards the test. Since the EEU is regarded as a passport letting the students experience a newer and brighter world, the teachers do not look at the high school years as the years for learning all four language skills. Instead, they motivate their students to spend a great amount of time and energy on practicing mock exam papers and test taking strategies which will be useless from the day after the EEU date.

Although the overall results of this study indicated that the EEU has negative effects on the teachers'

method of teaching in the classroom, the elimination of this exam would not be practical at the moment; however, there is optimism that this exam will become obsolete in the near future. Hence, the basic revision of the EEU format is recommended which can in turn affect teachers' teaching activities and students' learning activities in the high schools. Moreover, the necessity of conducting various research studies on the EEU stakeholders to know their perceptions and attitudes towards this exam seems apparent.
