when we speak about the heart we often talk about sentimental and emotional matters nonetheless what i mean to explore here is the heart as a chakra as an energy center as an intelligence and as pure love in the heart one can deal with and work on all subjects however in this day and age human beings are programmed and conditioned to experience life through another energy center the mental chakra which is also very important today we talk about the heart chakra as a center of energy and strength it is a combination this is about so much more than i can describe we all have many bodies you can imagine them as russian dolls
stacked inside one another because of our experience and because of the decisions we make as human beings,
our energy will activate many of these bodies and the heart chakra activates many others. Our personal
development goes through balancing and aligning all our chakras and energy centers and what our service
here is about is to give attention to and to reach the heart chakra. This approach is very enriching and it
expands this chakra. We develop ourselves in a personal and deep way throughout our evolutionary journey
the heart chakra is very caring with us in the true sense of the word. Care first of all it loves us and it teaches
us to find this love in ourselves. I am not talking about vanity nor narcissism. I am talking about a real deep
love about accepting our reality and the being that we truly are.

we’re everywhere and it’s time to come out of the closet. I speak of the tongue-tied generation. Buyers of books with titles like Master Spanish in Ten Minutes a Day while you nap. We grew up listening to the language usually in the kitchens of extended family, but we answered back mostly in English. Demetria Martínez wields her trademark blend of humor and irony to give voice to her own tongue-tied generation in this notable series of essays revealing her deeply personal views of the world. Martínez breaks down the barriers between prayer and action between the border denizen and the citizen of the world, and between patriarchal religion and the divine mother. She explores her identity as a woman who has within her the blood of the conquered and the conqueror and who must daily contend with yet a third world: white America.

ev. Shapiro has been writing about patient centered care, physician-patient communication, and relationships between doctors and their patients since 2007. In joy in medicine, what 100 healthcare professionals have to say about job satisfaction, dissatisfaction, burnout, and joy, Eve turns her attention to those on the healthcare delivery side of this sacred interaction. These healthcare professionals share their enthusiasm, joys, frustrations, disappointments, insights, advice, stories, fears, and pain. Explaining how it looks and feels to work in healthcare today, no matter who you are, where you work, or what your position is in the organizational hierarchy, the healthcare professionals who provide patient care deserve our collective interest in their humanity without some insight into who they are and the forces with which they struggle. Every day we cannot fully appreciate the obstacles to providing the care we all want for ourselves and our families during the best of times.

Drawing upon previously untapped resources in the UMW archives and oral histories by major figures of the 1930s and 1940s, the authors have created a remarkable portrait of this self-made man and his times. advances in the practice of psychiatry have occurred in fits and starts over the last several decades these advances are evident to anyone long affiliated with the field and are best appreciated through direct experience of living through the times these advances can also be gleaned from historical overviews in textbooks or the recollections of one s teachers and mentors returning to the original papers that have ushered in these changes is rarely done for various mostly practical reasons filtering through thousands of articles in psychiatry may prove daunting access to the manuscripts may be limited especially for papers not available electronically and understanding their impact requires a broader context moreover with so much active
research currently occurring in various branches of psychiatry current practitioners or trainees may find their attention focused on the present and this is reinforced by electronic search algorithms which return articles in reverse chronological order not surprisingly citations for articles in virtually all fields decline precipitously for articles over five years old as scholars and professionals we are losing touch with our academic heritage yet navigating the future of psychiatry requires a firm understanding of its past this resource serves as a guide for anyone seeking to understand the evolution of psychiatry as a scientific discipline it does so by summarizing over 100 landmark papers in psychiatry and placing their scientific contributions within a historical context an introductory section sets the stage for the major theoretical constructs within the field with chapters devoted to ontology and nosology subsequent sections examine major facets of the theory and practice of psychiatry such as pathogenesis of psychiatric illness pharmacotherapy psychotherapy and somatic treatments these sections are divided logically into chapters addressing important contributions to the understanding and treatment of specific disorders a final section explores ethical considerations within each field this framework echoes the complexity of psychiatry which cannot be reduced to a single set of diagnoses or subspecialty categories highlighting the research trajectory of psychiatry this resource will appeal to academics trainees and practitioners who desire a comprehensive easy to read up to date collection of psychiatry s pivotal moments by understanding the challenges inspirations and insights from the past readers will be better poised to address new and ongoing challenges within the field
