2005-02-01 The SEC's Market Structure Proposal
2012-06-25 This volume examines international statebuilding in terms of language and meanings rather than focusing narrowly on current policy practices after two decades of evolution towards more integrated multi-faceted or simply stated more intrusive statebuilding and peacebuilding operations. A critical literature has slowly emerged on the economic social and political impacts of these interventions. Scholars have started to analyse unintended consequences of peacebuilding missions analysing all aspects of interventions. Central to the book is the understanding that language is both the most important tool for building anything of social significance and the primary repository of meanings in any social setting. Hence this volume exemplifies how the multiple realities of state fragility and statebuilding are being conceptualised in mainstream literature by highlighting the repercussions this conceptualisation has on good practices for statebuilding, drawing together leading scholars in the field. This project provides a meeting point between constructivism in international relations and the critical perspective on liberal peacebuilding, shedding new light on the commonly accepted meanings and concepts underlying the international order as well as the semantics of contemporary statebuilding practices. This book will be of much interest to students of statebuilding and intervention war and conflict studies, security studies, and international relations.
